Please also see the Healthier Hospital web site for detailed information about the guidance for manufacturers to meet the criteria. The information below is a summary.

<http://www.healthierhospitals.org/>.

Boss Design/Cartwright products, as of December 2019, meet the Safer Chemicals Challenge of the Healthier Hospital Interiors Goal version 2.0 (Nov 2015). The goal is met by following the guidance set by the Challenge. Furniture and options specified must meet the below. Note that in all cases, it is the customer's responsibility to select textiles which do not contain the following:

- 1. Formaldehyde.**
- 2. Perfluorinated Compounds (PFC's)**
- 3. Polyvinyl Chloride (PVC), avoid PVC-based upholstery products.**
- 4. Antimicrobials. Customers are responsible for, and must choose appropriate textiles and pay attention to chemical content prior to ordering.**
- 5. Flame Retardants. Customers must select appropriate textiles prior to ordering, as many textiles contain them. If we are to meet the City of Boston and/or CAL 133 fire codes, then meeting the HH standard is not possible.**

Check the HH website for textile vendors and products who have tested to meet the above.

Boss Design/Cartwright worked with our suppliers and the testing company to compile information to meet the standard. We cannot share data from each supplier. Also, we may change the materials at our discretion & commit to updating the list as necessary. Always check the document on the HH web site, and check with our factory prior to ordering.
